# On the Horadam hybrid quaternions 

Ali Dağdeviren ${ }^{1}$ and Ferhat Kürüz ${ }^{2}$

[^0]
#### Abstract

In this study, we firstly define the Horadam hybrid quaternions and present some of their properties. Then, we define Fibonacci and Lucas hybrid quaternions, and also we study the relationship between the Fibonacci and the Lucas hybrid quaternions which connect the Fibonacci quaternions and Lucas quaternions. Furthermore, we also give some identities such as the Binet formulas and Cassini identities for Fibonacci and Lucas hybrid quaternions.

2010 Mathematics Subject Classification. 11B39. 11R52.
Keywords. Horadam numbers, hybrid numbers, fibonacci numbers, hybrid quaternions.

## 1 Introduction

Quaternions were introduced by Sir William Rowan Hamilton in 1866 as an extension of the complex numbers [1]. Quaternions are an important number system used in different areas such as computer science, quantum physics, and analysis [2, 3, 4]. This type of quaternions also called real quaternions. A real quaternion is defined as

$$
Q=z_{0}+z_{1} i+z_{2} j+z_{3} k
$$

where $z_{0}, z_{1}, z_{2}, z_{3}$ are real numbers. Also, $i, j$, and $k$ are the units of real quaternions which satisfy the following equalities

$$
\begin{equation*}
i^{2}=j^{2}=k^{2}=i j k=-1 \tag{1.1}
\end{equation*}
$$

Note that the set of real quaternions form non-commutative but associative algebra. The conjugate of the quaternion $Q$ is defined by $\bar{Q}=z_{0}-z_{1} i-z_{2} j-z_{3} k$. Moreover, the norm of any quaternion $Q$ is denoted by $\|Q\|$ and defined by $\|Q\|=\sqrt{Q \bar{Q}}=\sqrt{z_{0}^{2}+z_{1}^{2}+z_{2}^{2}+z_{3}^{2}} \in \mathbb{R}$. For further information about real quaternions see [5].

Hybrid numbers have been defined by Özdemir [6]. In this work, a number system of such numbers consisting of all three number systems(complex, dual, and hyperbolic) has been given. The set of hybrid numbers, $\mathbb{K}$, is defined as following:

$$
\mathbb{K}=\left\{z=a+b \mathbf{i}+c \boldsymbol{\varepsilon}+d \mathbf{h}: a, b, c, d \in \mathbb{R}, \begin{array}{c}
\mathbf{i}^{2}=-1, \varepsilon^{2}=0, \mathbf{h}^{2}=1  \tag{1.2}\\
\mathbf{i h}=-\mathbf{h i}=\boldsymbol{\varepsilon}+\mathbf{i}
\end{array}\right\} .
$$

Multiplication rules of $\mathbf{i}, \varepsilon$, and $\mathbf{h}$ can be given as following table:

[^1]Tbilisi Centre for Mathematical Sciences.
Received by the editors: 26 May 2021.
Accepted for publication: 28 October 2021.

| $\cdot$ | $\mathbf{i}$ | $\varepsilon$ | $\mathbf{h}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{i}$ | -1 | $1-\mathbf{h}$ | $\varepsilon+\mathbf{i}$ |
| $\varepsilon$ | $1+\mathbf{h}$ | 0 | $-\varepsilon$ |
| $\mathbf{h}$ | $-\varepsilon-\mathbf{i}$ | $\varepsilon$ | 1 |

Table 1. Multiplication table of hybrid units
The conjugate of the hybrid number is defined by $z^{c}=a-b \mathbf{i}-c \varepsilon-d \mathbf{h}$. Furthermore, the norm of any hybrid number $z$ is

$$
\|z\|=\sqrt{z z^{c}}=\sqrt{a^{2}+(b-c)^{2}-c^{2}-d^{2}} .
$$

For further information about hybrid number system, see [6].
The hybrid quaternions have recently been defined as a new quaternion system by Daǧdeviren in [7]. This system has a strong algebraic structure and it is a generalization of complex, dual, and hyperbolic quaternions. That is, complex quaternions, dual quaternions and hyperbolic quaternions can be obtained from hybrid quaternions in special cases. Moreover, hybrid quaternions are also generalised the features of the other three quaternion systems such as inner product, vector product, and norm. The set of hybrid quaternions denoted by $\mathbf{H}_{\mathbb{K}}$ and defined as

$$
\begin{equation*}
\mathbf{H}_{\mathbb{K}}=\left\{Q=z_{0}+z_{1} i+z_{2} j+z_{3} k \mid z_{0}, z_{1}, z_{2}, z_{3} \in \mathbb{K}\right\} \tag{1.3}
\end{equation*}
$$

where quaternionic units $i, j, k$ satisfies the equation (1.1). The quaternionic units $i, j, k$ commutes with the hybrid units $\mathbf{i}, \varepsilon, \mathbf{h}$. Thus, any hybrid quaternion can be written as

$$
Q=q_{0}+q_{1} \mathbf{i}+q_{2} \varepsilon+q_{3} \mathbf{h}
$$

where $q_{0}, q_{1}, q_{2}, q_{3}$ are quaternions and $\mathbf{i}, \varepsilon, \mathbf{h}$ are hybrid units obeying the multiplication rules in the Table 1, [7].

Two hybrid quaternions are equal if all their components are equal, one by one. Let $Q=$ $q_{0}+q_{1} \mathbf{i}+q_{2} \varepsilon+q_{3} \mathbf{h}$ and $P=p_{0}+p_{1} \mathbf{i}+p_{2} \varepsilon+p_{3} \mathbf{h}$ and be any two hybrid quaternions. Addition and subtraction of these two hybrid quaternions are defined as

$$
Q \mp P=\left(q_{0} \mp p_{0}\right)+\left(q_{1} \mp p_{1}\right) \mathbf{i}+\left(q_{2} \mp p_{2}\right) \varepsilon+\left(q_{3} \mp p_{3}\right) \mathbf{h} .
$$

Multiplication of the hybrid quaternions is defined as

$$
\begin{aligned}
Q P= & \left(q_{0} p_{0}-q_{1} p_{1}+q_{3} p_{3}+q_{1} p_{2}+q_{2} p_{1}\right) \\
& +\left(q_{0} p_{1}+q_{1} p_{0}+q_{1} p_{3}-q_{3} p_{1}\right) \mathbf{i} \\
& +\left(q_{0} p_{2}+q_{2} p_{0}+q_{1} p_{3}-q_{3} p_{1}+q_{3} p_{2}-q_{2} p_{3}\right) \varepsilon \\
& +\left(q_{0} p_{3}+q_{3} p_{0}+q_{2} p_{1}-q_{1} p_{2}\right) \mathbf{h} .
\end{aligned}
$$

The multiplication of any two hybrid numbers with the help of hybrid units is expressed as above. Furthermore, the hybrid quaternions $Q$ and $P$ above can be written as $Q=z_{0}+z_{1} i+z_{2} j+z_{3} k$ and $P=t_{0}+t_{1} i+t_{2} j+t_{3} k$ in terms of quaternion units. Multiplication of these two hybrid quaternions can be given as

$$
\begin{aligned}
Q P= & \left(z_{0} t_{0}-z_{1} t_{1}-z_{2} t_{2}-z_{3} t_{3}\right) \\
& +\left(z_{1} t_{0}+z_{0} t_{1}-z_{3} t_{2}+z_{2} t_{3}\right) i \\
& +\left(z_{2} t_{0}+z_{3} t_{1}+z_{0} t_{2}-z_{1} t_{3}\right) j \\
& +\left(z_{3} t_{0}-z_{2} t_{1}+z_{1} t_{2}+z_{0} t_{3}\right) k .
\end{aligned}
$$

Further information about hybrid quaternions can be found in [7].
Generalized Fibonacci numbers were defined by Horadam [8, 9]. Moreover Horadam gave the formula for negative index terms of Horadam numbers [9]. Horadam numbers are defined as follow:

$$
\begin{equation*}
w_{n}=p w_{n-1}-q w_{n-2}, \quad n \geq 2 \tag{1.4}
\end{equation*}
$$

where $p, q, n$ are integers and $w_{0}, w_{1}$ are initial conditions. The Binet's formula of the Horadam numbers is

$$
\begin{equation*}
w_{n}=A \alpha^{n}+B \beta^{n} \tag{1.5}
\end{equation*}
$$

where $\alpha$ and $\beta$ are the roots of the equation $x^{2}-p x+q=0$. Also $A$ and $B$ are

$$
\begin{equation*}
A=\frac{w_{1}-w_{0} \beta}{\alpha-\beta}, \quad B=\frac{w_{0} \alpha-w_{1}}{\alpha-\beta} . \tag{1.6}
\end{equation*}
$$

In addition, Horadam numbers can be represent as $w_{n}\left(w_{0}, w_{1} ; p, q\right)$. For special $w_{0}, w_{1}, p$ and $q$ the equation (1.4) defines the well known numbers named as the Fibonacci type numbers. These types of numbers can be listed as follows:
i) $w_{n}(0,1 ; p, q)=\mathcal{U}_{n}-$ Generalized Fibonacci numbers,
ii) $w_{n}(2,1 ; p, q)=\mathcal{V}_{n}-$ Generalized Lucas numbers,
iii) $w_{n}(0,1 ; 1,-1)=\mathcal{F}_{n}-$ Fibonacci numbers,
iv) $w_{n}(2,1 ; 1,-1)=\mathcal{L}_{n}$ - Lucas numbers,
v) $w_{n}(0,1 ; 2,-1)=\mathcal{P}_{n}-$ Pell numbers,
vi) $w_{n}(2,2 ; 2,-1)=\mathcal{P} \mathcal{L}_{n}-$ Pell-Lucas numbers,
vii) $w_{n}(0,1 ; 1,-2)=\mathcal{J}_{n}$ - Jacobsthal numbers,
viii) $w_{n}(2,1 ; 1,-2)=\mathcal{J} \mathcal{L}_{n}-$ Jacobsthal-Lucas numbers,
ix) $w_{n}(0,1 ; 3,2)=\mathcal{M}_{n}-$ Mersenne Numbers,
x) $w_{n}(1,3 ; 3,-2)=\mathcal{F} \mathcal{E}_{n}-$ Fermat numbers.

These numbers have been studied from different perspectives $[10,11,12,13,14,9,15,16]$. Horadam hybrid numbers, a special type of hybrid numbers, were introduced and studied by SzynalLiana [11]. In this study, the author gave the Binet formulas, generating functions and characters for Horadam hybrid numbers. $n$th Horadam hybrid number is defined as

$$
\begin{equation*}
\mathcal{H} \mathcal{H}_{n}=w_{n}+\mathbf{i} w_{n+1}+\varepsilon w_{n+2}+\mathbf{h} w_{n+3} \tag{1.7}
\end{equation*}
$$

where $w_{n}$ is $n$th Horadam number. The Binet formula of the Horadam hybrid numbers is

$$
\begin{equation*}
w_{n}=A \alpha^{*} \alpha^{n}+B \beta^{*} \beta^{n} \tag{1.8}
\end{equation*}
$$

where $A, B$ are defined by (1.6) and $\alpha^{*}=1+\mathbf{i} \alpha+\varepsilon \alpha^{2}+\mathbf{h} \alpha^{3}, \beta^{*}=1+\mathbf{i} \beta+\varepsilon \beta^{2}+\mathbf{h} \beta^{3}$. Moreover, in the same article, the author defined Fibonacci and Lucas hybrid numbers as follows:

$$
\begin{aligned}
\mathcal{F} \mathcal{H}_{n} & =\mathcal{F}_{n}+\mathbf{i} \mathcal{F}_{n+1}+\varepsilon \mathcal{F}_{n+2}+\mathbf{h} \mathcal{F}_{n+3}, \\
\mathcal{L H} & =\mathcal{L}_{n}+\mathbf{i} \mathcal{L}_{n+1}+\varepsilon \mathcal{L}_{n+2}+\mathbf{h} \mathcal{L}_{n+3} .
\end{aligned}
$$

The other studies about Horadam hybrid numbers can be found in [17, 18, 19, 20, 21, 22].
In the literature, there are also studies on Fibonacci quaternions. In [8], $n$th Fibonacci and Lucas quaternions were defined by Horadam as follows:

$$
\begin{aligned}
\mathcal{F} \mathcal{Q}_{n} & =\mathcal{F}_{n}+i \mathcal{F}_{n+1}+j \mathcal{F}_{n+2}+k \mathcal{F}_{n+3}, \\
\mathcal{L} \mathcal{Q}_{n} & =\mathcal{L}_{n}+i \mathcal{L}_{n+1}+j \mathcal{L}_{n+2}+k \mathcal{L}_{n+3}
\end{aligned}
$$

where $i, j$ and $k$ are quaternion units which satisfy equations (1.1). Moreover, $\mathcal{F}_{n}$ and $\mathcal{L}_{n}$ are the $n$th Fibonacci and Lucas numbers, respectively. In [14], Halc have studied on Fibonacci quaternions and present the generating functions and Binet formulas for Fibonacci and Lucas quaternions. For the other studies about Fibonacci and Lucas quaternions see [23, 14].

In this study, using the hybrid quaternions firstly we will introduce the Horadam Hybrid quaternions to the literature by defining a more general structure of Horadam hybrid numbers and Horadam quaternions. Then, we will give Binet formulas for these numbers. Furthermore, we will examine the Fibonacci and Lucas hybrid quaternions in detail and consequently, we will give some properties and identities of these numbers.

In what follows, to avoid confusion we use notation as properly as we can. We will give the following table to make the symbols used in this study easier to understand.

| Notations | Numbers |
| :---: | :---: |
| $\mathcal{F H} \mathcal{Q}_{n}$ | Fibonacci hybrid quaternions |
| $\mathcal{L H} \mathcal{Q}_{n}$ | Lucas hybrid quaternions |
| $\mathcal{F} \mathcal{Q}_{n}$ | Fibonacci quaternions |
| $\mathcal{L} \mathcal{Q}_{n}$ | Lucas quaternions |
| $\mathcal{F} \mathcal{H}_{n}$ | Fibonacci hybrid numbers |
| $\mathcal{L} \mathcal{H}_{n}$ | Lucas hybrid numbers |
| $\mathcal{F}_{n}$ | Fibonacci numbers |
| $\mathcal{L}_{n}$ | Lucas numbers |

Table 2. Notation table of Numbers

## 2 Horadam hybrid quaternions

In this section, we define Horadam hybrid quaternions by using Horadam numbers. Therefore, we define the Horadam hybrid quaternion $\mathcal{H} \mathcal{H} \mathcal{Q}_{n}$ as

$$
\begin{equation*}
\mathcal{H H} \mathcal{Q}_{n}=\mathcal{H} \mathcal{H}_{n}+i \mathcal{H H}_{n+1}+j \mathcal{H H}_{n+2}+k \mathcal{H} \mathcal{H}_{n+3} \tag{2.1}
\end{equation*}
$$

where $i, j, k$ are quaternion units which satisfy equations (1.1) and $\mathcal{H} \mathcal{H}_{n}$ is the $n t h$ Horadam hybrid number as in (1.7). Moreover, every Horadam hybrid quaternion $\mathcal{H} \mathcal{H} \mathcal{Q}_{n}$ can be written as

$$
\begin{aligned}
\mathcal{H} \mathcal{H} \mathcal{Q}_{n}= & \left(w_{n}+\mathbf{i} w_{n+1}+\varepsilon w_{n+2}+\mathbf{h} w_{n+3}\right)+\left(w_{n+1}+\mathbf{i} w_{n+2}+\varepsilon w_{n+3}+\mathbf{h} w_{n+4}\right) i \\
& +\left(w_{n+2}+\mathbf{i} w_{n+3}+\boldsymbol{\varepsilon} w_{n+4}+\mathbf{h} w_{n+5}\right) j+\left(w_{n+3}+\mathbf{i} w_{n+4}+\boldsymbol{\varepsilon} w_{n+5}+\mathbf{h} w_{n+6}\right) k \\
= & \mathcal{H} \mathcal{Q}_{n}+\mathbf{i} \mathcal{H} \mathcal{Q}_{n+1}+\boldsymbol{\mathcal { H }} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{H} \mathcal{Q}_{n+3}
\end{aligned}
$$

where $\mathbf{i}, \boldsymbol{\varepsilon}, \mathbf{h}$ are hybrid units and $\mathcal{H} \mathcal{Q}_{n}=w_{n}+i w_{n+1}+j w_{n+2}+k w_{n+3}$ is the $n$th Horadam quaternion. The Fibonacci, Lucas, Pell, Jacobsthal, Pell-Lucas, and Jacobsthal-Lucas hybrid quaternions can be defined both by using Fibonacci $\left(\mathcal{F} \mathcal{H}_{n}\right), \operatorname{Lucas}\left(\mathcal{L H}_{n}\right), \operatorname{Pell}\left(\mathcal{P} \mathcal{H}_{n}\right)$, Jacobsthal $\left(\mathcal{J} \mathcal{H}_{n}\right)$, Pell-Lucas $\left(\mathcal{P} \mathcal{L H}_{n}\right)$, and Jacobsthal-Lucas $\left(\mathcal{J} \mathcal{L H}_{n}\right)$ hybrid number coefficients and by using Fibonacci $\left(\mathcal{F} \mathcal{Q}_{n}\right), \operatorname{Lucas}\left(\mathcal{L} \mathcal{Q}_{n}\right), \operatorname{Pell}\left(\mathcal{P} \mathcal{Q}_{n}\right), \operatorname{Jacobsthal}\left(\mathcal{J} \mathcal{Q}_{n}\right), \operatorname{Pell-Lucas}\left(\mathcal{P} \mathcal{L} \mathcal{Q}_{n}\right)$, and JacobsthalLucas $\left(\mathcal{J} \mathcal{L} \mathcal{Q}_{n}\right)$ quaternion coefficients respectively. We will define these hybrid quaternions as follows:
i) $n$th Fibonacci hybrid quaternion $\mathcal{F H} \mathcal{Q}_{n}$ is

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n} & =\mathcal{F} \mathcal{H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3} \\
& =\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3},
\end{aligned}
$$

ii) nth Lucas hybrid quaternion $\mathcal{L H} \mathcal{Q}_{n}$ is

$$
\begin{aligned}
\mathcal{L H} \mathcal{Q}_{n} & =\mathcal{L} \mathcal{H}_{n}+i \mathcal{L} \mathcal{H}_{n+1}+j \mathcal{L} \mathcal{H}_{n+2}+k \mathcal{L} \mathcal{H}_{n+3} \\
& =\mathcal{L} \mathcal{Q}_{n}+\mathrm{i} \mathcal{L} \mathcal{Q}_{n+1}+\varepsilon \mathcal{L} \mathcal{Q}_{n+2}+\mathrm{h} \mathcal{L} \mathcal{Q}_{n+3},
\end{aligned}
$$

iii) nth Pell hybrid quaternion $\mathcal{P H} \mathcal{Q}_{n}$ is

$$
\begin{aligned}
\mathcal{P H} \mathcal{Q}_{n} & =\mathcal{P} \mathcal{H}_{n}+i \mathcal{P} \mathcal{H}_{n+1}+j \mathcal{P} \mathcal{H}_{n+2}+k \mathcal{P} \mathcal{H}_{n+3} \\
& =\mathcal{P} \mathcal{Q}_{n}+\mathbf{i} \mathcal{P} \mathcal{Q}_{n+1}+\varepsilon \mathcal{P} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{P} \mathcal{Q}_{n+3}
\end{aligned}
$$

iv) $n$th Jacobsthal hybrid quaternion $\mathcal{J H} \mathcal{Q}_{n}$ is

$$
\begin{aligned}
\mathcal{J H} \mathcal{Q}_{n} & =\mathcal{J} \mathcal{H}_{n}+i \mathcal{J} \mathcal{H}_{n+1}+j \mathcal{J} \mathcal{H}_{n+2}+k \mathcal{J} \mathcal{H}_{n+3} \\
& =\mathcal{J} \mathcal{Q}_{n}+\mathbf{i} \mathcal{J} \mathcal{Q}_{n+1}+\varepsilon \mathcal{J} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{J} \mathcal{Q}_{n+3}
\end{aligned}
$$

v) nth Pell-Lucas hybrid quaternion $\mathcal{P} \mathcal{L H} \mathcal{Q}_{n}$ is

$$
\begin{aligned}
\mathcal{P} \mathcal{L H} \mathcal{Q}_{n} & =\mathcal{P} \mathcal{L H} \mathcal{H}_{n}+i \mathcal{P} \mathcal{L} \mathcal{H}_{n+1}+j \mathcal{P} \mathcal{L} \mathcal{H}_{n+2}+k \mathcal{P} \mathcal{L} \mathcal{H}_{n+3} \\
& =\mathcal{P} \mathcal{L} \mathcal{Q}_{n}+\mathbf{i} \mathcal{P} \mathcal{Q}_{n+1}+\varepsilon \mathcal{P} \mathcal{L}_{n+2}+\mathbf{h} \mathcal{L} \mathcal{Q}_{n+3},
\end{aligned}
$$

vi) nth Jacobsthal-Lucas hybrid quaternion $\mathcal{J} \mathcal{L H} \mathcal{Q}_{n}$ is

$$
\begin{aligned}
\mathcal{J} \mathcal{L H} \mathcal{Q}_{n} & =\mathcal{J} \mathcal{L} \mathcal{H}_{n}+i \mathcal{J} \mathcal{L H} \mathcal{H}_{n+1}+j \mathcal{J} \mathcal{L} \mathcal{H}_{n+2}+k \mathcal{J} \mathcal{L} \mathcal{H}_{n+3} \\
& =\mathcal{J} \mathcal{L} \mathcal{Q}_{n}+\mathbf{i} \mathcal{J} \mathcal{Q}_{n+1}+\varepsilon \mathcal{J} \mathcal{L} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{J} \mathcal{Q}_{n+3}
\end{aligned}
$$

Theorem 2.1. Let $n \in \mathbb{N}$, then the Binet formula for the Horadam hybrid quaternions is

$$
\mathcal{H H} \mathcal{Q}_{n}=A \alpha^{*} \underline{\alpha} \alpha^{n}+B \beta^{*} \underline{\beta} \beta^{n}
$$

where $A, B$ are defined by (1.6) and

$$
\begin{array}{rll}
\alpha^{*}=1+\mathbf{i} \alpha+\varepsilon \alpha^{2}+h \alpha^{3} & , \quad \beta^{*}=1+\mathbf{i} \beta+\varepsilon \beta^{2}+h \beta^{3} \\
\underline{\alpha}=1+i \alpha+j \alpha^{2}+k \alpha^{3} & , \quad \underline{\beta}=1+i \beta+j \beta^{2}+k \beta^{3}
\end{array}
$$

Proof. By using the definition of Horadam hybrid quaternions (2.1) and the Binet formula for the Horadam hybrid numbers (1.8), we obtain

$$
\begin{aligned}
\mathcal{H} \mathcal{H} \mathcal{Q}_{n}= & \left(A \alpha^{n} \alpha^{*}+B \beta^{n} \beta^{*}\right)+i\left(A \alpha^{n+1} \alpha^{*}+B \beta^{n+1} \beta^{*}\right) \\
& +j\left(A \alpha^{n+2} \alpha^{*}+B \beta^{n+2} \beta^{*}\right)+k\left(A \alpha^{n+3} \alpha^{*}+B \beta^{n+3} \beta^{*}\right) \\
= & \left(A \alpha^{n} \alpha^{*}\right)\left(1+i \alpha+j \alpha^{2}+k \alpha^{3}\right)+\left(B \beta^{n} \beta^{*}\right)\left(1+i \beta+j \beta^{2}+k \beta^{3}\right) \\
= & A \alpha^{*} \underline{\alpha} \alpha^{n}+B \beta^{*} \underline{\beta} \beta^{n} .
\end{aligned}
$$

## Q.E.D.

## 3 Fibonacci and Lucas hybrid quaternions

In this section, we examine the Fibonacci and Lucas Hybrid quaternions in detail and give some properties.

Definition 3.1. We denote the set of Fibonacci hybrid quaternios by $F H Q$ and define as follows: $F H Q=\left\{\mathcal{F H} \mathcal{Q}_{n}=\mathcal{F} \mathcal{H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3} \mid \mathcal{F} \mathcal{H}_{n}, n\right.$th Fibonacci hybrid number $\}$ where $i, j, k$ are quaternionic units. Moreover, here $n$ th, $(n+1) t h,(n+2) t h$ and $(n+3) t h$ Fibonacci hybrid numbers are

$$
\begin{align*}
\mathcal{F} \mathcal{H}_{n} & =\mathcal{F}_{n}+\mathbf{i} \mathcal{F}_{n+1}+\varepsilon \mathcal{F}_{n+2}+\mathbf{h} \mathcal{F}_{n+3},  \tag{3.1}\\
\mathcal{F} \mathcal{H}_{n+1} & =\mathcal{F}_{n+1}+\mathbf{i} \mathcal{F}_{n+2}+\varepsilon \mathcal{F}_{n+3}+\mathbf{h} \mathcal{F}_{n+4},  \tag{3.2}\\
\mathcal{F} \mathcal{H}_{n+2} & =\mathcal{F}_{n+2}+\mathbf{i} \mathcal{F}_{n+3}+\varepsilon \mathcal{F}_{n+4}+\mathbf{h} \mathcal{F}_{n+5},  \tag{3.3}\\
\mathcal{F} \mathcal{H}_{n+3} & =\mathcal{F}_{n+3}+\mathbf{i} \mathcal{F}_{n+4}+\varepsilon \mathcal{F}_{n+5}+\mathbf{h} \mathcal{F}_{n+6} \tag{3.4}
\end{align*}
$$

where $\mathbf{i}, \boldsymbol{\varepsilon}$, and $\mathbf{h}$ are the hybrid units. We will restate $\mathcal{F} \mathcal{H} \mathcal{Q}_{n}$ by using the equations (3.1), (3.2), (3.3) and (3.4) as below.

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n}= & \left(\mathcal{F}_{n}+\mathbf{i} \mathcal{F}_{n+1}+\varepsilon \mathcal{F}_{n+2}+\mathbf{h} \mathcal{F}_{n+3}\right)+i\left(\mathcal{F}_{n+1}+\mathbf{i} \mathcal{F}_{n+2}+\varepsilon \mathcal{F}_{n+3}+\mathbf{h} \mathcal{F}_{n+4}\right) \\
& +j\left(\mathcal{F}_{n+2}+\mathbf{i} \mathcal{F}_{n+3}+\varepsilon \mathcal{F}_{n+4}+\mathbf{h} \mathcal{F}_{n+5}\right)+k\left(\mathcal{F}_{n+3}+\mathbf{i} \mathcal{F}_{n+4}+\varepsilon \mathcal{F}_{n+5}+\mathbf{h} \mathcal{F}_{n+6}\right) \\
\mathcal{F H} \mathcal{Q}_{n}= & \mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3}
\end{aligned}
$$

where $\mathcal{F} \mathcal{Q}_{n}=\mathcal{F}_{n}+i \mathcal{F}_{n+1}+j \mathcal{F}_{n+2}+k \mathcal{F}_{n+3}$ is a Fibonacci quaternion. Therefore, the set of Fibonacci hybrid quaternios $F H Q$ can be redefined as

$$
F H Q=\left\{\mathcal{F H} \mathcal{Q}_{n}=\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3} \left\lvert\, \begin{array}{c}
\mathcal{F} \mathcal{Q}_{n}, n \text {th Fibonacci }  \tag{3.5}\\
\text { quaternion }
\end{array}\right.\right\}
$$

Remark 3.2. Every Fibonacci hybrid quaternion

$$
\mathcal{F H} \mathcal{Q}_{n}=\mathcal{F} \mathcal{H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3}
$$

can be written as

$$
\mathcal{F H} \mathcal{Q}_{n}=\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3}
$$

Definition 3.3. We denote the set of Lucas hybrid quaternios by $L H Q$ and define as

$$
L H Q=\left\{\mathcal{L H} \mathcal{Q}_{n}=\mathcal{L H}_{n}+i \mathcal{L H} \mathcal{H}_{n+1}+j \mathcal{L H}_{n+2}+k \mathcal{L H} \mathcal{H}_{n+3} \left\lvert\, \begin{array}{l}
\mathcal{L H}_{n}, n \text {th Lucas }  \tag{3.6}\\
\text { hybrid number }
\end{array}\right.\right\}
$$

where $i, j, k$ are quaternionic units. Moreover, here $\mathcal{L H}{ }_{n}$ is $n$th Lucas hybrid number

$$
\mathcal{L} \mathcal{H}_{n}=\mathcal{L}_{n}+\mathbf{i} \mathcal{L}_{n+1}+\varepsilon \mathcal{L}_{n+2}+\mathbf{h} \mathcal{L}_{n+3}
$$

As with Fibonacci hybrid quaternions above, Lucas hybrid quaternions can be redefined in terms of Lucas quaternions by

$$
L H Q=\left\{\mathcal{L H} \mathcal{Q}_{n}=\mathcal{L} \mathcal{Q}_{n}+\mathbf{i} \mathcal{L} \mathcal{Q}_{n+1}+\varepsilon \mathcal{L} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{L} \mathcal{Q}_{n+3} \left\lvert\, \begin{array}{c}
\mathcal{L} \mathcal{Q}_{n}, n \text {th Lucas }  \tag{3.7}\\
\text { quaternion }
\end{array}\right.\right\}
$$

where $\mathbf{i}, \varepsilon, \mathbf{h}$ are hybrid units. Moreover, here $\mathcal{L} \mathcal{Q}_{n}$ is $n$th Lucas quaternion

$$
\mathcal{L} \mathcal{Q}_{n}=\mathcal{L}_{n}+i \mathcal{L}_{n+1}+j \mathcal{L}_{n+2}+k \mathcal{L}_{n+3} .
$$

Remark 3.4. Every Lucas hybrid quaternion

$$
\mathcal{L H} \mathcal{Q}_{n}=\mathcal{L H}_{n}+i \mathcal{L H}_{n+1}+j \mathcal{L H}_{n+2}+k \mathcal{L H}_{n+3}
$$

can be written as

$$
\mathcal{L} \mathcal{H} \mathcal{Q}_{n}=\mathcal{L} \mathcal{Q}_{n}+\mathbf{i} \mathcal{L} \mathcal{Q}_{n+1}+\varepsilon \mathcal{L} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{L} \mathcal{Q}_{n+3}
$$

Definition 3.5. Let $\mathcal{F H} \mathcal{Q}_{n}$ and $\mathcal{F H} \mathcal{Q}_{m}$ be $n t h$ and $m t h$ terms of the Fibonacci hybrid quaternion sequences such that

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n} & =\mathcal{F} \mathcal{H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3} \\
& =\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3}
\end{aligned}
$$

and

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{m} & =\mathcal{F} \mathcal{H}_{m}+i \mathcal{F} \mathcal{H}_{m+1}+j \mathcal{F} \mathcal{H}_{m+2}+k \mathcal{F} \mathcal{H}_{m+3} \\
& =\mathcal{F} \mathcal{Q}_{m}+\mathbf{i} \mathcal{F} \mathcal{Q}_{m+1}+\varepsilon \mathcal{F} \mathcal{Q}_{m+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{m+3}
\end{aligned}
$$

Then, the addition and subtraction of the Fibonacci hybrid quaternions are defined by

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n} \mp \mathcal{F H} \mathcal{Q}_{m} & =\left(\mathcal{F} \mathcal{H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3}\right) \mp\left(\mathcal{F} \mathcal{H}_{m}+i \mathcal{F} \mathcal{H}_{m+1}+j \mathcal{F} \mathcal{H}_{m+2}+k \mathcal{F} \mathcal{H}_{m+3}\right) \\
& =\left(\mathcal{F} \mathcal{H}_{n} \mp \mathcal{F} \mathcal{H}_{m}\right)+i\left(\mathcal{F} \mathcal{H}_{n+1} \mp \mathcal{F} \mathcal{H}_{m+1}\right)+j\left(\mathcal{F} \mathcal{H}_{n+2} \mp \mathcal{F} \mathcal{H}_{m+2}\right)+k\left(\mathcal{F} \mathcal{H}_{n+3} \mp \mathcal{F} \mathcal{H}_{m+3}\right), \\
\mathcal{F H} \mathcal{Q}_{n} \mp \mathcal{F H} \mathcal{Q}_{m} & =\left(\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\boldsymbol{\mathcal { F } \mathcal { Q } _ { n + 2 } + \mathbf { h } \mathcal { F } \mathcal { Q } _ { n + 3 } ) \mp ( \mathcal { F } \mathcal { Q } _ { m } + \mathbf { i } \mathcal { F } \mathcal { Q } _ { m + 1 } + \varepsilon \mathcal { F } \mathcal { Q } _ { m + 2 } + \mathbf { h } \mathcal { F } \mathcal { Q } _ { m + 3 } )}\right. \\
& =\left(\mathcal{F} \mathcal{Q}_{n} \mp \mathcal{F} \mathcal{Q}_{m}\right)+\mathbf{i}\left(\mathcal{F} \mathcal{Q}_{n+1} \mp \mathcal{F} \mathcal{Q}_{m+1}\right)+\varepsilon\left(\mathcal{F} \mathcal{Q}_{n+2} \mp \mathcal{F} \mathcal{Q}_{m+2}\right)+\mathbf{h}\left(\mathcal{F} \mathcal{Q}_{n+3} \mp \mathcal{F} \mathcal{Q}_{m+3}\right) .
\end{aligned}
$$

Definition 3.6. Multiplication of the Fibonacci hybrid quaternions is defined in terms of Fibonacci hybrid numbers $\left(\mathcal{F} \mathcal{H}_{n}, \mathcal{F} \mathcal{H}_{m}\right)$ as follows:

$$
\begin{aligned}
& \mathcal{F H} \mathcal{Q}_{n} \mathcal{F H}_{m}=\left(\mathcal{F H}_{n}+i \mathcal{F H}_{n+1}+j \mathcal{F H} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3}\right)\left(\mathcal{F H}_{m}+i \mathcal{F H}_{m+1}+j \mathcal{F H} \mathcal{H}_{m+2}+k \mathcal{F H} \mathcal{H}_{m+3}\right) \\
& =\left(\mathcal{F H}_{n} \mathcal{F H}_{m}-\mathcal{F} \mathcal{H}_{n+1} \mathcal{F H}_{m+1}-\mathcal{F} \mathcal{H}_{n+2} \mathcal{F H}_{m+2}-\mathcal{F} \mathcal{H}_{n+3} \mathcal{F H}_{m+3}\right) \\
& +i\left(\mathcal{F H}_{n} \mathcal{F H}_{m+1}+\mathcal{F} \mathcal{H}_{n+1} \mathcal{F} \mathcal{H}_{m}+\mathcal{F} \mathcal{H}_{n+2} \mathcal{F H}_{m+3}-\mathcal{F} \mathcal{H}_{n+3} \mathcal{F H}_{m+2}\right) \\
& +j\left(\mathcal{F H}_{n} \mathcal{F H}_{m+2}-\mathcal{F} \mathcal{H}_{n+1} \mathcal{F H}_{m+3}+\mathcal{F} \mathcal{H}_{n+2} \mathcal{F H}_{m}+\mathcal{F H}_{n+3} \mathcal{F H}_{m+1}\right) \\
& +k\left(\mathcal{F H}_{n} \mathcal{F} \mathcal{H}_{m+3}+\mathcal{F} \mathcal{H}_{n+1} \mathcal{F} \mathcal{H}_{m+2}-\mathcal{F} \mathcal{H}_{n+2} \mathcal{F H}_{m+1}+\mathcal{F} \mathcal{H}_{n+3} \mathcal{F} \mathcal{H}_{m}\right)
\end{aligned}
$$

or in terms of Fibonacci quaternions $\left(\mathcal{F} \mathcal{Q}_{n}, \mathcal{F} \mathcal{Q}_{m}\right)$ it can be defined as follows:

$$
\begin{aligned}
\mathcal{F} \mathcal{H} \mathcal{Q}_{n} \mathcal{F} \mathcal{H} \mathcal{Q}_{m}= & \left(\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3}\right)\left(\mathcal{F} \mathcal{Q}_{m}+\mathbf{i} \mathcal{F} \mathcal{Q}_{m+1}+\varepsilon \mathcal{F} \mathcal{Q}_{m+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{m+3}\right) \\
= & \left(\mathcal{F} \mathcal{Q}_{n} \mathcal{F} \mathcal{Q}_{m}-\mathcal{F} \mathcal{Q}_{n+1} \mathcal{F} \mathcal{Q}_{m+1}+\mathcal{F} \mathcal{Q}_{n+3} \mathcal{F} \mathcal{Q}_{m+3}+\mathcal{F} \mathcal{Q}_{n+1} \mathcal{F} \mathcal{Q}_{m+2}+\mathcal{F} \mathcal{Q}_{n+2} \mathcal{F} \mathcal{Q}_{m+1}\right) \\
& +\mathbf{i}\left(\mathcal{F} \mathcal{Q}_{n} \mathcal{F} \mathcal{Q}_{m+1}+\mathcal{F} \mathcal{Q}_{n+1} \mathcal{F} \mathcal{Q}_{m}+\mathcal{F} \mathcal{Q}_{n+1} \mathcal{F} \mathcal{Q}_{m+3}-\mathcal{F} \mathcal{Q}_{n+3} \mathcal{F} \mathcal{Q}_{m+1}\right) \\
& +\varepsilon\left(\mathcal{F} \mathcal{Q}_{n} \mathcal{F} \mathcal{Q}_{m+2}+\mathcal{F} \mathcal{Q}_{n+1} \mathcal{F} \mathcal{Q}_{m+3}+\mathcal{F} \mathcal{Q}_{n+2} \mathcal{F} \mathcal{Q}_{m}-\mathcal{F} \mathcal{Q}_{n+2} \mathcal{F} \mathcal{Q}_{m+3}\right. \\
& \left.-\mathcal{F} \mathcal{Q}_{n+3} \mathcal{F} \mathcal{Q}_{m+1}+\mathcal{F} \mathcal{Q}_{n+3} \mathcal{F} \mathcal{Q}_{m+2}\right) \\
& +\mathbf{h}\left(\mathcal{F} \mathcal{Q}_{n} \mathcal{F} \mathcal{Q}_{m+3}-\mathcal{F} \mathcal{Q}_{n+1} \mathcal{F} \mathcal{Q}_{m+2}+\mathcal{F} \mathcal{Q}_{n+2} \mathcal{F} \mathcal{Q}_{m+1}+\mathcal{F} \mathcal{Q}_{n+3} \mathcal{F} \mathcal{Q}_{m}\right) .
\end{aligned}
$$

The scalar and vector parts of $\mathcal{F H} \mathcal{Q}_{n}$ which is the $n t h$ term of the Fibonacci hybrid quaternion sequence $\left(\mathcal{F H} \mathcal{Q}_{n}\right)$ are denoted by

$$
S_{\mathcal{F H} \mathcal{H}_{n}}=\mathcal{F} \mathcal{H}_{n} \quad \text { and } \quad V_{\mathcal{F H} \mathcal{Q}_{n}}=i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3}
$$

So, any Fibonacci hybrid quaternion $\mathcal{F H} \mathcal{Q}_{n}$ can be written as $\mathcal{F H} \mathcal{Q}_{n}=S_{\mathcal{F H} \mathcal{Q}_{n}}+V_{\mathcal{F H} \mathcal{Q}_{n}}$. Now we can redefine addition and subtraction as

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n} \mp \mathcal{F H} \mathcal{Q}_{m} & =\left(S_{\mathcal{F H}_{n}}+V_{\mathcal{F H} \mathcal{Q}_{n}}\right) \mp\left(S_{\mathcal{F H} \mathcal{Q}_{m}}+V_{\mathcal{F H} \mathcal{Q}_{m}}\right) \\
& =\left(S_{\mathcal{F H} \mathcal{Q}_{n}} \mp S_{\mathcal{F H} \mathcal{Q}_{m}}\right)+\left(V_{\mathcal{F H} \mathcal{Q}_{n}} \mp V_{\mathcal{F H} \mathcal{H}_{m}}\right),
\end{aligned}
$$

and multiplication

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n} \mathcal{F H} \mathcal{Q}_{n}= & \left(S_{\mathcal{F H} \mathcal{Q}_{n}}+V_{\mathcal{F H} Q_{n}}\right)\left(S_{\mathcal{F H} Q_{n}}+V_{\mathcal{F H}}\right. \\
& \\
= & S_{\mathcal{F H} \mathcal{Q}_{n}} S_{\mathcal{F H} \mathcal{Q}_{n}}\left\langle V_{\mathcal{F H} Q_{n}}, V_{\mathcal{F H} \mathcal{Q}_{n}}\right\rangle \\
& +S_{\mathcal{F H} \mathcal{Q}_{n}} V_{\mathcal{F H} \mathcal{Q}_{n}}+S_{\mathcal{F H} \mathcal{Q}_{n}} V_{\mathcal{F H} \mathcal{Q}_{n}}+V_{\mathcal{F H} \mathcal{H}_{n}} \times V_{\mathcal{F H} \mathcal{H}_{n}}
\end{aligned}
$$

Definition 3.7. The conjugate of Fibonacci hybrid quaternion can be define three different types for $\mathcal{F H} \mathcal{Q}_{n}=\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3}$
i) Quaternion conjugate, $\overline{\mathcal{F H} \mathcal{Q}_{n}}: \overline{\mathcal{F H} \mathcal{Q}_{n}}=\overline{\mathcal{F Q}}_{n}+\mathbf{i} \overline{\mathcal{F Q}}_{n+1}+\varepsilon \overline{\mathcal{F Q}}_{n+2}+\mathbf{h} \overline{\mathcal{F Q}}_{n+3}$,
ii) Hybrid conjugate, $\left(\mathcal{F H} \mathcal{Q}_{n}\right)^{C}:\left(\mathcal{F} \mathcal{H} \mathcal{Q}_{n}\right)^{C}=\mathcal{F} \mathcal{Q}_{n}-\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}-\varepsilon \mathcal{F} \mathcal{Q}_{n+2}-\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3}$,
iii) Total conjugate, $\left(\mathcal{F H} \mathcal{Q}_{n}\right)^{\dagger}:\left(\mathcal{F H} \mathcal{Q}_{n}\right)^{\dagger}=\overline{\left(\mathcal{F H} \mathcal{Q}_{n}\right)^{C}}=\overline{\mathcal{F Q}}_{n}-\mathbf{i} \overline{\mathcal{F Q}}_{n+1}-\varepsilon \overline{\mathcal{F}}_{n+2}-\mathbf{h} \overline{\mathcal{F}}_{n+3}$.

Theorem 3.8. Let $\mathcal{F H} \mathcal{Q}_{n}$ be $n$th term of the Fibonacci sequence. Then, for $n \geq 1$ we can give the following relations:
i) $\mathcal{F H} \mathcal{Q}_{n}+\mathcal{F H} \mathcal{Q}_{n+1}=\mathcal{F H} \mathcal{Q}_{n+2}$,

$$
\text { ii) } \begin{aligned}
\mathcal{F H} \mathcal{Q}_{n}-i \mathcal{F H} \mathcal{Q}_{n+1}-j \mathcal{F H} \mathcal{Q}_{n+2}-k \mathcal{F} \mathcal{H} \mathcal{Q}_{n+3} & =\mathcal{F} \mathcal{H}_{n}+\mathcal{F} \mathcal{H}_{n+2}+\mathcal{F} \mathcal{H}_{n+4}+\mathcal{F} \mathcal{H}_{n+6} \\
& =\mathcal{L H}_{n+1}+\mathcal{L H} \mathcal{H}_{n+5}
\end{aligned}
$$

iii) $\mathcal{F H} \mathcal{Q}_{n}-\mathbf{i} \mathcal{F H} \mathcal{Q}_{n+1}-\varepsilon \mathcal{F H} \mathcal{Q}_{n+2}-\mathbf{h} \mathcal{F H} \mathcal{Q}_{n+3}=\mathcal{F} \mathcal{Q}_{n}-\mathcal{F} \mathcal{Q}_{n+2}-2 \mathcal{F} \mathcal{Q}_{n+3}+\mathcal{F} \mathcal{Q}_{n+6}$.

Proof. Let $\mathcal{F H} \mathcal{H}_{n}, \mathcal{L} \mathcal{H}_{n}$ and $\mathcal{F} \mathcal{Q}_{n}$ be $n$th Fibonacci hybrid number, $n$th Lucas hybrid number and $n$th Fibonacci quaternion, respectively.
i) We can show this equality in two ways; first one is using Fibonacci hybrid numbers:

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n}+\mathcal{F H} \mathcal{Q}_{n+1}= & \left(\mathcal{F H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3}\right) \\
& +\left(\mathcal{F H}_{n+1}+i \mathcal{F} \mathcal{H}_{n+2}+j \mathcal{F} \mathcal{H}_{n+3}+k \mathcal{F} \mathcal{H}_{n+4}\right) \\
= & \left(\mathcal{F H}_{n}+\mathcal{F} \mathcal{H}_{n+1}\right)+i\left(\mathcal{F H}_{n+1}+\mathcal{F} \mathcal{H}_{n+2}\right) \\
& +j\left(\mathcal{F H}_{n+2}+\mathcal{F} \mathcal{H}_{n+3}\right)+k\left(\mathcal{F H}_{n+3}+\mathcal{F} \mathcal{H}_{n+4}\right) \\
= & \mathcal{F} \mathcal{H}_{n+2}+i \mathcal{F} \mathcal{H}_{n+3}+j \mathcal{F} \mathcal{H}_{n+4}+k \mathcal{F} \mathcal{H}_{n+5}=\mathcal{F} \mathcal{H} \mathcal{Q}_{n+2} .
\end{aligned}
$$

The second one is using Fibonacci quaternions:

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n}+\mathcal{F H} \mathcal{Q}_{n+1}= & \left(\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3}\right) \\
& +\left(\mathcal{F} \mathcal{Q}_{n+1}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+2}+\varepsilon \mathcal{F} \mathcal{Q}_{n+3}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+4}\right) \\
= & \left(\mathcal{F} \mathcal{Q}_{n}+\mathcal{F} \mathcal{Q}_{n+1}\right)+\mathbf{i}\left(\mathcal{F} \mathcal{Q}_{n+1}+\mathcal{F} \mathcal{Q}_{n+2}\right. \\
& +\varepsilon\left(\mathcal{F} \mathcal{Q}_{n+2}+\mathcal{F} \mathcal{Q}_{n+3}\right)+\mathbf{h}\left(\mathcal{F} \mathcal{Q}_{n+3}+\mathcal{F} \mathcal{Q}_{n+4}\right) \\
= & \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+3}+\varepsilon \mathcal{F} \mathcal{Q}_{n+4}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+5}=\mathcal{F} \mathcal{H} \mathcal{Q}_{n+2} .
\end{aligned}
$$

ii) If we use $\mathcal{F} \mathcal{H}_{n-1}+\mathcal{F} \mathcal{H}_{n+1}=\mathcal{L H}_{n}$ [11], we have

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n}-i \mathcal{F H} \mathcal{Q}_{n+1}-j \mathcal{F H} \mathcal{Q}_{n+2}-k \mathcal{F H} \mathcal{Q}_{n+3} & =\left(\mathcal{F H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3}\right) \\
& -i\left(\mathcal{F H}_{n+1}+i \mathcal{F} \mathcal{H}_{n+2}+j \mathcal{F} \mathcal{H}_{n+3}+k \mathcal{F} \mathcal{H}_{n+4}\right) \\
& -j\left(\mathcal{F H}_{n+2}+i \mathcal{F} \mathcal{H}_{n+3}+j \mathcal{F} \mathcal{H}_{n+4}+k \mathcal{F} \mathcal{H}_{n+5}\right) \\
& -k\left(\mathcal{F H}_{n+3}+i \mathcal{F} \mathcal{H}_{n+4}+j \mathcal{F} \mathcal{H}_{n+5}+k \mathcal{F} \mathcal{H}_{n+6}\right) \\
& =\mathcal{F} \mathcal{H}_{n}+\mathcal{F} \mathcal{H}_{n+2}+\mathcal{F} \mathcal{H}_{n+4}+\mathcal{F} \mathcal{H}_{n+6} \\
& =\mathcal{L H}_{n+1}+\mathcal{L H}_{n+5}
\end{aligned}
$$

iii)

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n}-\mathbf{i} \mathcal{F H} \mathcal{Q}_{n+1}-\varepsilon \mathcal{F H} \mathcal{Q}_{n+2} & -h \mathcal{F} \mathcal{H} \mathcal{Q}_{n+3} \\
& =\left(\mathcal{F H} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F H} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F H} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F H} \mathcal{Q}_{n+3}\right) \\
& -\mathbf{i}\left(\mathcal{F H} \mathcal{Q}_{n+1}+\mathbf{i} \mathcal{F H} \mathcal{Q}_{n+2}+\varepsilon \mathcal{F} \mathcal{H} \mathcal{Q}_{n+3}+\mathbf{h} \mathcal{F} \mathcal{H} \mathcal{Q}_{n+4}\right) \\
& -\varepsilon\left(\mathcal{F H} \mathcal{Q}_{n+2}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+3}+\varepsilon \mathcal{F H} \mathcal{Q}_{n+4}+\mathbf{h} \mathcal{F H} \mathcal{Q}_{n+5}\right) \\
& -\mathbf{h}\left(\mathcal{F H} \mathcal{Q}_{n+3}+\mathbf{i} \mathcal{F H} \mathcal{Q}_{n+4}+\varepsilon \mathcal{F H} \mathcal{Q}_{n+5}+\mathbf{h} \mathcal{F H} \mathcal{Q}_{n+6}\right) \\
& =\mathcal{F H} \mathcal{Q}_{n}-\mathcal{F H} \mathcal{Q}_{n+2}-2 \mathcal{F H} \mathcal{Q}_{n+3}+\mathcal{F H} \mathcal{Q}_{n+6} .
\end{aligned}
$$

Q.E.D.

Theorem 3.9. Let $\mathcal{F H} \mathcal{Q}_{n}$ and $\mathcal{L H} \mathcal{Q}_{n}$ be $n t h$ Fibonacci hybrid quaternion and the Lucas hybrid quaternion sequences respectively. The following relations are satisfied:
i) $\mathcal{F H} \mathcal{Q}_{n-1}+\mathcal{F H} \mathcal{Q}_{n+1}=\mathcal{L H} \mathcal{Q}_{n}$
ii) $\mathcal{F H} \mathcal{Q}_{n+2}-\mathcal{F H} \mathcal{Q}_{n-2}=\mathcal{L H} \mathcal{Q}_{n}$

Proof.
i) We know that $\mathcal{L H} \mathcal{H}_{n}=\mathcal{F} \mathcal{H}_{n-1}+\mathcal{F} \mathcal{H}_{n+1}$. Then we have

$$
\begin{aligned}
\mathcal{F H}_{n-1}+\mathcal{F H} \mathcal{Q}_{n+1}= & \left(\mathcal{F H}_{n-1}+i \mathcal{F} \mathcal{H}_{n}+j \mathcal{F} \mathcal{H}_{n+1}+k \mathcal{F} \mathcal{H}_{n+2}\right) \\
& +\left(\mathcal{F} \mathcal{H}_{n+1}+i \mathcal{F} \mathcal{H}_{n+2}+j \mathcal{F} \mathcal{H}_{n+3}+k \mathcal{F} \mathcal{H}_{n+4}\right) \\
= & \left(\mathcal{F} \mathcal{H}_{n-1}+\mathcal{F} \mathcal{H}_{n+1}\right)+i\left(\mathcal{F} \mathcal{H}_{n}+F_{n+2}\right) \\
& +j\left(\mathcal{F H}_{n+1}+\mathcal{F} \mathcal{H}_{n+3}\right)+k\left(\mathcal{F} \mathcal{H}_{n+2}+\mathcal{F} \mathcal{H}_{n+4}\right) \\
= & \mathcal{L} \mathcal{H}_{n}+i \mathcal{L} \mathcal{H}_{n+1}+j \mathcal{L H}_{n+2}+k \mathcal{L} \mathcal{H}_{n+3} \\
= & \mathcal{L H} \mathcal{Q}_{n}
\end{aligned}
$$

ii) We know that $\mathcal{F} \mathcal{H}_{n}=\mathcal{F} \mathcal{H}_{n+2}-\mathcal{F} \mathcal{H}_{n-2}$.

$$
\begin{aligned}
\mathcal{F H} \mathcal{Q}_{n+2}-\mathcal{F H} \mathcal{Q}_{n-2}= & \left(\mathcal{F} \mathcal{H}_{n+2}+i \mathcal{F} \mathcal{H}_{n+3}+j \mathcal{F H}_{n+4}+k \mathcal{F} \mathcal{H}_{n+5}\right) \\
& -\left(\mathcal{F H}_{n-2}+i \mathcal{F} \mathcal{H}_{n-1}+j \mathcal{F} \mathcal{H}_{n}+k \mathcal{F} \mathcal{H}_{n+1}\right) \\
= & \left(\mathcal{F} \mathcal{H}_{n+2}-\mathcal{F} \mathcal{H}_{n-2}\right)+i\left(\mathcal{F} \mathcal{H}_{n+3}-\mathcal{F} \mathcal{H}_{n-1}\right) \\
& +j\left(\mathcal{F} \mathcal{H}_{n+4}-\mathcal{F} \mathcal{H}_{n}\right)+k\left(\mathcal{F} \mathcal{H}_{n+5}-\mathcal{F} \mathcal{H}_{n+1}\right) \\
= & \mathcal{L} \mathcal{H}_{n}+i \mathcal{L H}_{n+1}+j \mathcal{L H}_{n+2}+k \mathcal{L} \mathcal{H}_{n+3} \\
= & \mathcal{L} \mathcal{H}_{n}
\end{aligned}
$$

Q.E.D.

Theorem 3.10. Let $\mathcal{F H} \mathcal{Q}_{n}$ be $n t h$ Fibonacci hybrid quaternion sequence $\left(\mathcal{F H} \mathcal{Q}_{n}\right)$ and $\overline{\mathcal{F H} \mathcal{Q}_{n}}$, $\mathcal{F H} \mathcal{Q}_{n}^{C}, \mathcal{F H} \mathcal{Q}_{n}^{\dagger}$ be the quaternion conjugate, hybrid conjugate and total conjugate of $n t h$ Fibonacci hybrid quaternion respectively. The following relations are satisfies:
i) $\mathcal{F H} \mathcal{Q}_{n}+\overline{\mathcal{F H} \mathcal{Q}_{n}}=2 \mathcal{F H}{ }_{n}$
ii) $\mathcal{F H} \mathcal{Q}_{n}+\mathcal{F H} \mathcal{Q}_{n}^{C}=2 \mathcal{F} \mathcal{Q}_{n}$
iii) $\mathcal{F H} \mathcal{Q}_{n}+\mathcal{F H} \mathcal{Q}_{n}^{\dagger}=-2 \mathcal{F}_{n}-8 \mathcal{F}_{n+1}+2\left(\mathcal{F H} \mathcal{Q}_{n+1}+\mathcal{F H} \mathcal{Q}_{n+2}+\mathcal{F H} \mathcal{Q}_{n+3}\right)$

Proof.
i) $\mathcal{F H} \mathcal{Q}_{n}+\overline{\mathcal{F H} \mathcal{Q}_{n}}=\left(\mathcal{F H}_{n}+i \mathcal{F H} \mathcal{H}_{n+1}+j \mathcal{F H} \mathcal{N}_{n+2}+k \mathcal{F H} \mathcal{H}_{n+3}\right)$

$$
+\left(\mathcal{F} \mathcal{H}_{n}-i \mathcal{F} \mathcal{H}_{n+1}-j \mathcal{F} \mathcal{H}_{n+2}-k \mathcal{F} \mathcal{H}_{n+3}\right)
$$

$$
=2 \mathcal{F} \mathcal{H}_{n}
$$

ii) $\mathcal{F H} \mathcal{Q}_{n}+\mathcal{F H} \mathcal{Q}_{n}^{C}=\left(\mathcal{F H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3}\right)$

$$
\begin{aligned}
& +\left(\mathcal{F H}_{n}^{C}+i \mathcal{F} \mathcal{H}_{n+1}^{C}+j \mathcal{F} \mathcal{H}_{n+2}^{C}+k \mathcal{F} \mathcal{H}_{n+3}^{C}\right) \\
= & \left(\mathcal{F H}_{n}+\mathcal{F} \mathcal{H}_{n}^{C}\right)+i\left(\mathcal{F} \mathcal{H}_{n+1}+\mathcal{F} \mathcal{H}_{n+1}^{C}\right) \\
& +j\left(\mathcal{F} \mathcal{H}_{n+2}+\mathcal{F} \mathcal{H}_{n+2}^{C}\right)+k\left(\mathcal{F} \mathcal{H}_{n+3}+\mathcal{F} \mathcal{H}_{n+3}^{C}\right) \\
= & 2\left(\mathcal{F}_{n}+i \mathcal{F}_{n+1}+j \mathcal{F}_{n+2} k \mathcal{F}_{n+3}\right)=2 \mathcal{F} \mathcal{Q}_{n}
\end{aligned}
$$

$$
\text { iii) } \begin{aligned}
\mathcal{F H} \mathcal{Q}_{n}+\mathcal{F} \mathcal{H} \mathcal{Q}_{n}^{\dagger}= & \left(\mathcal{F} \mathcal{H}_{n}+i \mathcal{F} \mathcal{H}_{n+1}+j \mathcal{F} \mathcal{H}_{n+2}+k \mathcal{F} \mathcal{H}_{n+3}\right) \\
& +\left(\mathcal{F} \mathcal{H}_{n}^{C}-i \mathcal{F} \mathcal{H}_{n+1}^{C}-j \mathcal{F} \mathcal{H}_{n+2}^{C}-k \mathcal{F} \mathcal{H}_{n+3}^{C}\right) \\
= & \left(\mathcal{F} \mathcal{H}_{n}+\mathcal{F} \mathcal{H}_{n}^{C}\right)+i\left(\mathcal{F} \mathcal{H}_{n+1}-\mathcal{F} \mathcal{H}_{n+1}^{C}\right) \\

= & -2 \mathcal{F}_{n}-8 \mathcal{F}_{n+1}+2\left(\mathcal{F} \mathcal{H}_{n+1}+\mathcal{F} \mathcal{H}_{n+2}+\mathcal{F} \mathcal{H}_{n+3}\right)
\end{aligned}
$$

Q.E.D.

Theorem 3.11 (Binet's Formulas). Let $\mathcal{F H} \mathcal{Q}_{n}$ and $\mathcal{L H} \mathcal{Q}_{n}$ be Fibonacci hybrid quaternion and Lucas hybrid quaternion respectively. The Binet formulas for these hybrid quaternions are given as follows:
i) $\mathcal{F H} \mathcal{Q}_{n}=\frac{\alpha^{*} \underline{\alpha} \alpha^{n}-\beta^{*} \underline{\beta} \beta^{n}}{\alpha-\beta}$
ii) $\mathcal{L H} \mathcal{Q}_{n}=\alpha^{*} \underline{\alpha} \alpha^{n}+\beta^{*} \underline{\beta} \beta^{n}$
where $\alpha^{*}=1+\mathbf{i} \alpha+\varepsilon \alpha^{2}+\mathbf{h} \alpha^{3}, \beta^{*}=1+\mathbf{i} \beta+\varepsilon \beta^{2}+\mathbf{h} \beta^{3}, \underline{\alpha}=1+i \alpha+j \alpha^{2}+k \alpha^{3}$ and $\underline{\beta}=$ $1+i \beta+j \beta^{2}+k \beta^{3}$.

Proof. In [14], Halici gave the Binet's formula for Fibonacci and Lucas quaternions by

$$
\begin{equation*}
\mathcal{F} \mathcal{Q}_{n}=\frac{\underline{\alpha} \alpha^{n}-\underline{\beta} \beta^{n}}{\alpha-\beta} \tag{3.8}
\end{equation*}
$$

and

$$
\begin{equation*}
\mathcal{L} \mathcal{Q}_{n}=\underline{\alpha} \alpha^{n}+\underline{\beta} \beta^{n} . \tag{3.9}
\end{equation*}
$$

i) By using (3.8), we have

$$
\begin{aligned}
& \mathcal{F H} \mathcal{Q}_{n}=\mathcal{F} \mathcal{Q}_{n}+\mathbf{i} \mathcal{F} \mathcal{Q}_{n+1}+\varepsilon \mathcal{F} \mathcal{Q}_{n+2}+\mathbf{h} \mathcal{F} \mathcal{Q}_{n+3} \\
&=\frac{\underline{\alpha} \alpha^{n}-\underline{\beta} \beta^{n}}{\alpha-\beta}+\mathbf{i} \frac{\underline{\alpha} \alpha^{n+1}-\underline{\beta} \beta^{n+1}}{\alpha-\beta}+\varepsilon \frac{\underline{\alpha} \alpha^{n+2}-\underline{\beta} \beta^{n+2}}{\alpha-\beta}+\mathbf{h} \underline{\alpha} \alpha^{n+3}-\underline{\beta} \beta^{n+3} \\
& \alpha-\beta \\
&=\frac{\left(\underline{\alpha} \alpha^{n}-\underline{\beta} \beta^{n}\right)+\mathbf{i}\left(\underline{\alpha} \alpha^{n+1}-\underline{\beta} \beta^{n+1}\right)+\varepsilon\left(\underline{\alpha} \alpha^{n+2}-\underline{\beta} \beta^{n+2}\right)+\mathbf{h}\left(\underline{\alpha} \alpha^{n+3}-\underline{\beta} \beta^{n+3}\right)}{\alpha-\beta} \\
&=\frac{\left(\underline{\alpha} \alpha^{n}+\mathbf{i} \underline{\alpha} \alpha^{n+1}+\varepsilon \underline{\alpha} \underline{\alpha} \alpha^{n+2}+\mathbf{h} \underline{\alpha} \alpha^{n+3}\right)-\left(\underline{\beta} \beta^{n}+\mathbf{i} \underline{\beta} \beta^{n+1}+\boldsymbol{\varepsilon} \underline{\beta} \beta^{n+2}+\mathbf{h} \underline{\beta} \beta^{n+3}\right)}{\alpha-\beta} \\
&=\frac{\underline{\alpha} \alpha^{n}\left(1+\mathbf{i} \alpha+\varepsilon \alpha^{2}+\mathbf{h} \alpha^{3}\right)-\underline{\beta} \beta^{n}\left(1+\mathbf{i} \beta+\boldsymbol{\varepsilon} \beta^{2}+\mathbf{h} \beta^{3}\right)}{\alpha-\beta} \\
&=\frac{\alpha^{*} \underline{\alpha} \alpha^{n}-\beta^{*} \underline{\alpha} \beta^{n}}{\alpha-\beta} .
\end{aligned}
$$

ii) By using (3.9), we have

$$
\begin{aligned}
\mathcal{L H} \mathcal{Q}_{n} & =\mathcal{L} \mathcal{Q}_{n}+\mathbf{i} \mathcal{L} \mathcal{Q}_{n+1}+\varepsilon \mathcal{L} \mathcal{Q}_{n+2}+h \mathcal{L} \mathcal{Q}_{n+3} \\
& =\underline{\alpha} \alpha^{n}+\underline{\beta} \beta^{n}+\mathbf{i} \underline{\alpha} \alpha^{n+1}+\underline{\beta} \beta^{n+1}+\varepsilon \underline{\alpha} \alpha^{n+2}+\underline{\beta} \beta^{n+2}+\mathbf{h} \underline{\alpha} \alpha^{n+3}+\underline{\beta} \beta^{n+3} \\
& =\left(\underline{\alpha} \alpha^{n}+\underline{\beta} \beta^{n}\right)+\mathbf{i}\left(\underline{\alpha} \alpha^{n+1}+\underline{\beta} \beta^{n+1}\right)+\varepsilon\left(\underline{\alpha} \alpha^{n+2}+\underline{\beta} \beta^{n+2}\right)+\mathbf{h}\left(\underline{\alpha} \alpha^{n+3}+\underline{\beta} \beta^{n+3}\right) \\
& =\left(\underline{\alpha} \alpha^{n}+\mathbf{i} \underline{\alpha} \alpha^{n+1}+\varepsilon \underline{\alpha} \alpha^{n+2}+\mathbf{h} \underline{\alpha} \alpha^{n+3}\right)+\left(\underline{\beta} \beta^{n}+\mathbf{i} \underline{\beta} \beta^{n+1}+\boldsymbol{\varepsilon} \underline{\beta} \beta^{n+2}+\mathbf{h} \underline{\beta} \beta^{n+3}\right) \\
& =\underline{\alpha} \alpha^{n}\left(1+\mathbf{i} \alpha+\varepsilon \alpha^{2}+\mathbf{h} \alpha^{3}\right)+\underline{\beta} \beta^{n}\left(1+\mathbf{i} \beta+\boldsymbol{\varepsilon} \beta^{2}+\mathbf{h} \beta^{3}\right) \\
& =\alpha^{*} \underline{\alpha} \alpha^{n}+\beta^{*} \underline{\beta} \beta^{n} .
\end{aligned}
$$

Q.E.D.

Theorem 3.12 (Cassini's Identities). The following equations are hold:

$$
\begin{aligned}
& C_{1}=\mathcal{F H} \mathcal{Q}_{n+1} \mathcal{F H} \mathcal{Q}_{n-1}-\mathcal{F H} \mathcal{Q}_{n}^{2}=(-1)^{n} \frac{\alpha \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}-\beta \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}}{\alpha-\beta} \\
& C_{2}=\mathcal{L H} \mathcal{Q}_{n+1} \mathcal{L H} \mathcal{Q}_{n-1}-\mathcal{L H} \mathcal{Q}_{n}^{2}=(-1)^{n} \sqrt{5}\left(\alpha \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}-\beta \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}\right)
\end{aligned}
$$

where $\alpha$ and $\beta$ be the roots of equation $x^{2}-2 x-1=0, \underline{\alpha}=1+\alpha i+\alpha^{2} j+\alpha^{3} L, \underline{\beta}=1+\beta i+\beta^{2} j+\beta^{3} k$, $\alpha^{*}=1+\alpha \mathbf{i}+\alpha^{2} \varepsilon+\alpha^{3} \mathbf{h}$ and $\beta^{*}=1+\beta \mathbf{i}+\beta^{2} \varepsilon+\beta^{3} \mathbf{h}$.

Proof. For the first Cassini identity $C_{1}$, we get

$$
\begin{aligned}
C_{1}= & \left(\frac{\alpha^{n+1} \alpha^{*} \underline{\alpha}-\beta^{n+1} \beta^{*} \underline{\beta}}{\alpha-\beta}\right)\left(\frac{\alpha^{n-1} \alpha^{*} \underline{\alpha}-\beta^{n-1} \beta^{*} \underline{\beta}}{\alpha-\beta}\right)-\left(\frac{\alpha^{n} \alpha^{*} \underline{\alpha}-\beta^{n} \beta^{*} \underline{\beta}}{\alpha-\beta}\right)^{2} \\
= & \frac{\alpha^{2 n}\left(\alpha^{*}\right)^{2} \underline{\alpha}^{2}-\alpha^{n+1} \beta^{n-1} \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}-\beta^{n+1} \alpha^{n-1} \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}+\beta^{2 n}\left(\beta^{*}\right)^{2} \beta^{2}}{(\alpha-\beta)^{2}} \\
& -\frac{\alpha^{2 n}\left(\alpha^{*}\right)^{2} \underline{\alpha}^{2}-\alpha^{n} \beta^{n} \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}-\beta^{n} \alpha^{n} \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}+\beta^{2 n}\left(\beta^{*}\right)^{2} \beta^{2}}{(\alpha-\beta)^{2}} \\
= & \frac{\alpha^{n-1} \beta^{n} \beta^{*} \alpha^{*}(\alpha-\beta) \underline{\beta} \underline{\alpha}-\alpha^{n} \beta^{n-1} \alpha^{*} \beta^{*}(\alpha-\beta) \underline{\alpha} \underline{\beta}}{(\alpha-\beta)^{2}} \\
= & (-1)^{n} \frac{\left(\alpha \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}-\beta \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}\right)}{\alpha-\beta}
\end{aligned}
$$

For the second Cassini identity $C_{2}$, we get

$$
\begin{aligned}
C_{2}= & \left(\alpha^{n+1} \alpha^{*} \underline{\alpha}+\beta^{n+1} \beta^{*} \underline{\beta}\right)\left(\alpha^{n-1} \alpha^{*} \underline{\alpha}+\beta^{n-1} \beta^{*} \underline{\beta}\right)-\left(\alpha^{n} \alpha^{*} \underline{\alpha}+\beta^{n} \beta^{*} \underline{\beta}\right)^{2} \\
= & \alpha^{2 n}\left(\alpha^{*}\right)^{2} \underline{\alpha}^{2}+\alpha^{n+1} \beta^{n-1} \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}+\beta^{n+1} \alpha^{n-1} \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}+\beta^{2 n}\left(\beta^{*}\right)^{2} \beta^{2} \\
& -\alpha^{2 n}\left(\alpha^{*}\right)^{2} \underline{\alpha}^{2}+\alpha^{n} \beta^{n} \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}+\beta^{n} \alpha^{n} \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}+\beta^{2 n}\left(\beta^{*}\right)^{2} \beta^{2} \\
= & \alpha^{n-1} \beta^{n} \beta^{*} \alpha^{*}(\beta-\alpha) \underline{\beta} \underline{\alpha}+\alpha^{n} \beta^{n-1} \alpha^{*} \beta^{*}(\alpha-\beta) \underline{\alpha} \underline{\beta} \\
= & \alpha^{n-1} \beta^{n-1}(\alpha-\beta)\left(\alpha \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}-\beta \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}\right) \\
= & (-1)^{n} \sqrt{5}\left(\alpha \alpha^{*} \beta^{*} \underline{\alpha} \underline{\beta}-\beta \beta^{*} \alpha^{*} \underline{\beta} \underline{\alpha}\right) .
\end{aligned}
$$

Q.E.D.

## 4 Conclusion

In this paper, we have introduced the Horadam hybrid quaternions and some special classes of number sequences such as Fibonacci, Lucas, Pell and Jacobsthal hybrid quaternions. Especially, we have examined the Fibonacci and Lucas hybrid quaternions comprehensively. Moreover, some identities like Binet's formula and Cassini's identity for Fibonacci and Lucas hybrid quaternions have been given. Other sequences on Hybrid quaternions can be studied as future works.
